

Java Recap

Win up to 1,000 points per answer

Powered by  Poll Everywhere

Which one of these are not associated with program compilation and execution?

JRE java run time environment

50%

✓ JDK java development kit → use when u writing the code. (like java.util, system.out, etc)

50%

JIT

0%

JVM virtual machine, which will run bytecode thing.

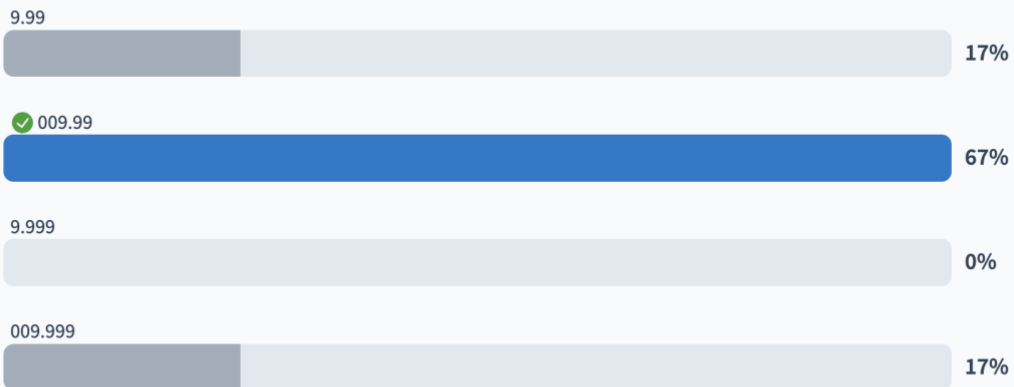

0%

Powered by  Poll Everywhere

What does this print?

`System.out.printf("%06.2f%n", 9.999);`

009.99

Powered by Poll Everywhere

You can take inputs by using these (individually or with some other classes)

multiple choice.

Powered by Poll Everywhere

If $x = 2$ and $y = 3$, what will be the value of y after the statement
`boolean a = (x + 3) > 5 && --y > 0;`

the first statement is incorrect . so the second statement not executed

Powered by Poll Everywhere

What is the output for this?

`System.out.println("Hello world".charAt(5));`

0 1 2 3 4 5

Powered by Poll Everywhere

How many times the loop runs?

```
int a = 2;
```

```
do{
```

```
  a--;
```

```
}while(a>1);
```

*a = 1
1 > 1 == false ⇒ so only run one time*

Powered by Poll Everywhere

Objects are passed by value whereas primitives are passed by reference to method arguments?

object pass by reference, primitive pass by value.

interface, array of integer inside, also pass by reference.

Powered by Poll Everywhere

All constants should be made final static?

Powered by  Poll Everywhere

Java does not allow static classes but methods and variables can be made static.

we do have static class

Powered by  Poll Everywhere

Integer i = 42; is a valid statement because Java does

Object class

auto unboxing

smaller sized primitives can be converted into larger primitives

☒ autoboxing

Powered by Poll Everywhere

Wizy
★ An enums is stored internally as an integer.

False

☒ True

Green . Yellow. Red
0 1 2

*⇒ see in lecture side
in week 4*

Powered by Poll Everywhere

I make wrong answer

What is the output for this?
`int[] a = {2,3,4};`
`System.out.println(a.size());`

Powered by Poll Everywhere

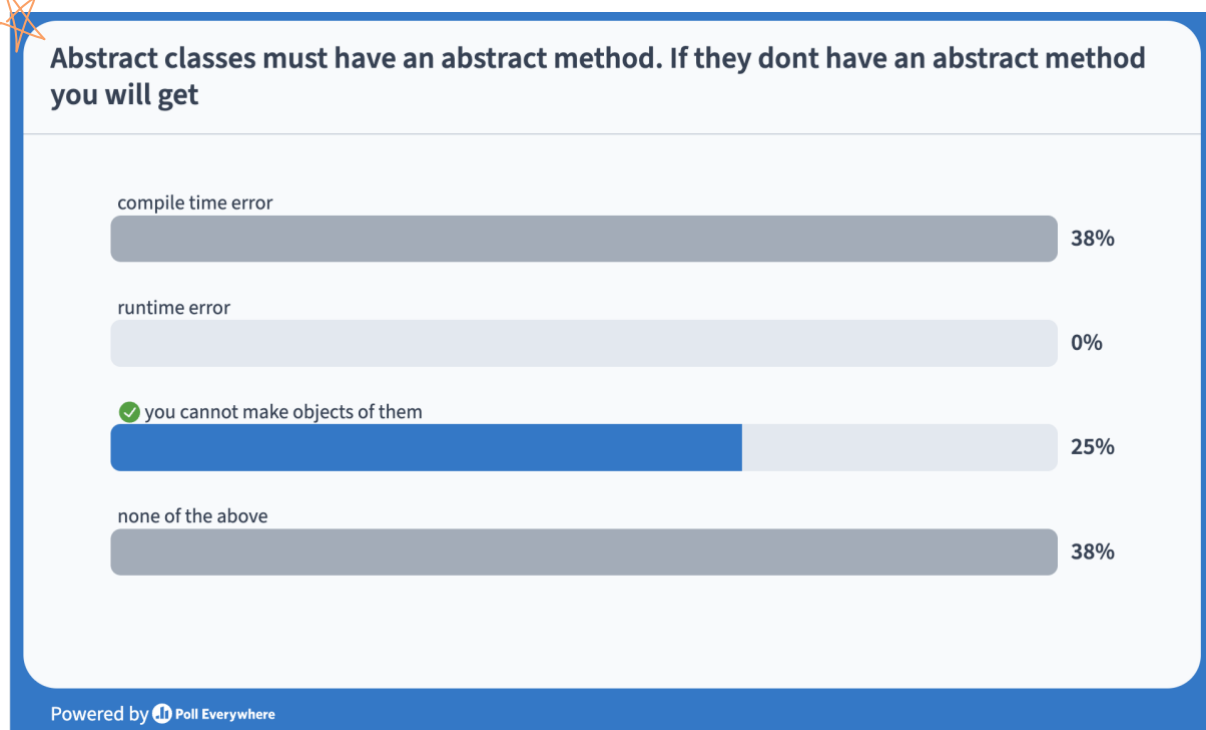

Select the ~~in~~ correct statement

Powered by Poll Everywhere

Wrong *

watch these part again.

overloading : early binding

overriding is also called

overriding

overloading

Powered by Poll Everywhere

methods in interfaces needs to be defined public.

it's automatic public
you can ⇒ void drive()

Powered by Poll Everywhere

An interface cannot be extended

Powered by  Poll Everywhere

The method that raises/throws exception should also catch the exception

Powered by  Poll Everywhere

You cannot nest multiple catch blocks

✓ False

100%

True

0%

Powered by  Poll Everywhere

All Exceptions classes must inherit from

Object

22%

✓ Exception

78%

Powered by  Poll Everywhere

BufferedReader can read binary files as well

↓ can only read text file.

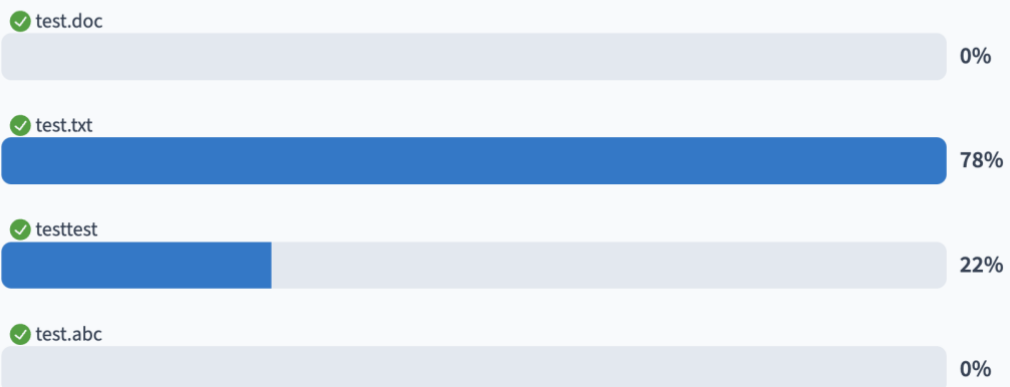

Powered by  Poll Everywhere

What are the valid filenames that java can read

not care about the file extension

↓ all of them

Powered by  Poll Everywhere

When you define a generic *public class SomeClass* you can only define methods with the type T.

✓ False

True

Powered by  Poll Everywhere

Read this part again.

Which of the following do not belong to CollectionsFramework?

ArrayList

HashMap

✓ MapList

a key as String and then the value is a list

HashSet
